PROFESSIONAL SUMMARY

Computer Science & Engineering undergraduate (CGPA: 9.06) with proven full-stack development skills and hands-on experience building AI-powered, production-grade web applications. Proficient in Python, Flask, React.js, MongoDB, and REST API design. Experienced in integrating large language models (Google Gemini AI), implementing biometric analytics, and delivering end-to-end software solutions — seeking a Software Development or AI Engineering internship to apply and deepen these skills.

EDUCATION

Bachelor of Technology – Computer Science & Engineering 2024 – 2028
Aditya College of Engineering and Technology, Surampalem
CGPA: 9.06 / 10.0

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript
Web Technologies: React.js, Node.js, Flask, HTML5, CSS3, Tailwind CSS, REST APIs
Databases: MongoDB (Atlas), Oracle SQL
AI / ML Tools: Google Gemini AI, MediaPipe, LangChain (RAG), OpenAI API
Core CS: Data Structures & Algorithms, OOP, DBMS, SDLC, Problem Solving
Tools: Git, GitHub, Firebase, Jinja2, Chart.js, WeasyPrint, Monaco Editor

PROJECT EXPERIENCE

SkillStack AI — Full-Stack AI Career Launchpad | *Python · Flask · MongoDB Atlas · Google Gemini AI · Firebase · React.js*

- Architected and deployed a full-stack placement preparation platform from scratch, integrating 11 domain-specific Flask Blueprint modules covering mock interviews, resume building, coding assessments, and live job discovery
- Engineered an AI mock interview engine using MediaPipe FaceMesh for real-time biometric analytics (blink detection, gaze tracking) and Web Speech API for voice recognition; Gemini AI evaluates responses across 5 performance axes
- Built a 5-step RAG pipeline for ATS-optimised resume generation — template retrieval → Gemini XYZ-formula rewriting → Jinja2 rendering → WeasyPrint PDF/DOCX export — consistently achieving 88–98% ATS compatibility scores
- Developed a multi-platform coding profile aggregator pulling live stats from LeetCode (GraphQL), Codeforces (REST), CodeChef, GFG, and HackerRank with 6-hour MongoDB caching to prevent API rate-limit violations
- Implemented a 4-tier AI fallback chain (Gemini → OpenAI → OpenRouter → NVIDIA NIM LLaMA 3.1) with purpose-based load balancing across 4 API keys and exponential backoff, ensuring high availability under rate limits
- Secured the platform with Firebase Phone OTP, server-side session guards, SHA-256 password hashing, and werkzeug filename sanitisation; deployed 20+ pytest test cases across all Blueprint endpoints

Centralized Student Affairs & Club Management Portal | *Python · Flask · React.js · Tailwind CSS · MongoDB · Chart.js*

- Designed and developed a full-stack administrative dashboard centralizing university club management, extension activities, and SAC operations for the Dean of Student Affairs, eliminating fragmented spreadsheet-based workflows
- Built RESTful file-handling APIs enabling coordinators to upload Excel sheets and dynamically ingest event logs and member lists into MongoDB, replacing manual data entry and reducing data processing time significantly
- Engineered a responsive glassmorphism-styled React.js + Tailwind CSS frontend with Role-Based Access Control (RBAC), delivering strict permission-scoped views for Dean and Coordinator roles
- Integrated Chart.js analytics dashboard with real-time multi-dimensional filtering (School, Department, Year, Event), enabling data-driven decisions for administrators across thousands of student records
- Automated NAAC-compliant institutional reporting (criteria 5.1, 5.2, 5.3) with one-click PDF and Excel export via html2pdf.js and SheetJS, reducing manual report generation effort

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 – AI Foundations Associate | Oracle Corporation
- IT Specialist – HTML & CSS | Pearson Group
- Gemini AI Foundational Associate | Google (STAR Academy)
- C Essentials 1 & 2 | Cisco

ACHIEVEMENTS & COMPETITIONS

- Runner-Up – Google Developer Groups Tech Sprint (Aditya University), 2025–2026
- Top 5 Team – Google Hacksprint 2K25 (competitive hackathon, institution-wide selection)
- Selected – Smart India Internal Hackathon 2024–25 (national-level qualifying round)
